

Swachh Bharat Mission (Urban) Survey Report

Name: Manish Kumar Thakur

Date: 05-05-2026

Website: <https://cf.sbmurban>

Introduction

This report is based on the Swachh Bharat Mission (Urban) survey that I filled on the official website. The main purpose of this survey is to understand the cleanliness of my area, waste collection system, and how aware people are about sanitation and hygiene.

My Survey Responses

1. Waste Collection

In my area, waste is collected daily from my household.

2. Waste Segregation

I know about waste segregation, but I do not separate dry and wet waste regularly.

3. Collection Method

The waste is collected in a mixed form and not separated properly.

4. Street Cleaning

Daily sweeping does not happen in my area.

5. Cleanliness Rating

I would rate the cleanliness of my area as **good**.

6. Garbage Dumps

Garbage dumps are seen rarely in my area.

7. Work of Authorities

I feel the local authorities are doing an average (neutral) job in maintaining cleanliness.

8. Public Cleanliness Behavior

People rarely do open urination or defecation in public places.

9. Public Toilets

I have not used any public toilet recently.

10. Awareness of RRR Centers

I am not aware of any Reduce, Reuse, Recycle (RRR) centers in my area.

11. Sewer Cleaning

For sewer or septic tank cleaning, I contact the local municipality.

12. Complaint System

I am not aware of any system to report cleanliness problems.

13. Complaint Experience

I did not feel the need to report any complaint.

Conclusion

From this survey, I can say that waste collection in my area is working properly, but there are still some problems. Waste is not separated, and people are not fully aware of proper waste management. Cleanliness is good, but there is still scope for improvement.

Suggestions

- People should be encouraged to separate wet and dry waste
- Waste should be collected separately, not mixed
- Awareness about RRR centers should be increased
- Government should inform people about complaint systems
- Daily cleaning in streets should be improved
